Troubleshooting Organization Sync

Double check with the customer, how exactly the they want organization sync to work and the settings in the configuration. The create_missing is by default not checked and will blocked the creation of new records in the target application based on the what the source of truth field is set.

> Source_of_Truth
> ServiceNow
>
> ☐ Create_Missing ☐ Update_Name

- ***Create_Missing***. Select this option if you want PowerFlow to create a new organization or company if that record is missing, based on your selection in the *Source_of_Truth* field. By default, this option is not selected.

If there still an issue please collect the following information

Please provide Name and sys_id of the company record from the core_company table.

Name	sys_id

Company Records are pulled from ServiceNow using the follow API. The given example has the region set to “del_test” this would need to be updated, for your specific configuration.

> /api/x_sclo_scilogic/v1/sciencelogic/companies?region=del_test&sysparm_offset=00&sysparm_limit=100

Example payload return is provided.

    "sysparm_offset": 0,
    "sysparm_limit": 100,
    "return_count": 3,
    "total_count": 3
}
```

The custom API has some filtering on it to limit what is returned from the core_company table.

Domain Separated instance:
'sys_domain!=global^x_sclo_scilogic_monitored=true^x_sclo_scilogic_region=' + region,
*** On domain separated instances the api will not return companies in the global domain.*

Non-Domain Separated Instance: 'x_sclo_scilogic_monitored=true^x_sclo_scilogic_region=' + region,

Both filtering requires some manual intervention, if you want company to be returned and created in SL1. The application field on the core_company table 'x_sclo_scilogic_monitored' needs to be true and the region needs to match the region set in PowerFlow. I have provided an example. Please provided the following and the information should be available on the core_company table within ServiceNow.

Name	x_sclo_scilogic_monitored	x_sclo_scilogic_region	Domain	sys_id
SILO	*true*	*del_test*	*global*	*d576a7101b36b7006af3dac4bd4bcb97*
