Title

[NOTICE] ISOs may not have the drivers necessary to support current Dell hardware

Summary

Help Summary

[NOTICE] ISOs may not have the drivers necessary to support current Dell hardware

Article Details

Severity Level & Impact

[Notice] This impacts Usability of the product

Issue

The ISO will not detect disks during the install, so it can not proceed with the install as seen below:

The error displayed is:

```
Failed to save storage configuration
No usable disks.
```

Details

At time of writing, Dell sells a minimum of R450/R650. The latest servers are R670, which is 2 generations ahead of the R440/R640 models that we indicate we provide support for on the systems requirements page. Dell is no longer selling the hardware that we support in ISOs that are current at the time of writing. The

hardware Dell offers currently may come with a H965i Perc controller, which our ISO does not currently support. It is likely that there are other storage controllers available that we do not currently support.

Steps To Reproduce

1. Attempt to purchase hardware from Dell, request a R440/R640 that we indicate we support
2. Dell will tell you that they can not fulfill that request
3. Purchase a model that you can currently buy from Dell, such as a R660 with an upgraded H965i storage controller
4. Attempt to install the SL1 12.1.1 ISO
5. Observe the error in the **Issue** section of this article

Symptoms

Already described in the **Issue** section - the disks are not detected when attempting to install the ISO.

Workaround

The 12.1.1 ISO that supports the H965i Perc controller can be found here: https://upload.sciencelogic.com/sharing/J7G2cOoJh

It should have a md5sum value of **3e62e577a4e7bcff3ad70a8fb746f09b**

If a different ISO version is necessary, please open a support case referencing this KB. Please provide the details of your hardware - what is the Dell model, and what the storage controller that it uses is. Support will need to open a new engineering escalation to request that a new ISO be created with the necessary drivers for the version that you need. This is not a trivial task, so customers are encouraged to update using the ISOs that are currently available if possible.

Fix

Engineering plans to support newer controllers in future ISO releases. (Engineering Jira Reference ID: EM-70959)
